ArmaXX Pest Control – Brown Recluse Spider Service

I. Treatment Guidelines: Brown Recluse Spider

Day of Services:

- You will have to leave your home/property for a minimum of 2 hours.
- Please remove all pets, including fish from your dwelling.
- For faster spider control results, remove boxes from closets and storage areas.
- Please check under the bed for personal items and remove.
- Make sure all doors are unlocked, especially storage rooms, attics, basements, crawlspaces, etc.
- Open drawers in bedrooms.
- Turn off heating/air conditioning units and fans.
- Natural gas “pilot” lights need to be turned off.
- Please cover computer equipment and other electronics with plastic sheeting – i.e. plastic bags.
- Collect all loose items found on the floor – i.e. pacifiers, bottles and small toys and secure. (Be sure to check corners, under beds, behind the couch, etc . . .

Returning Home

1. Open all doors.
2. Ventilate other rooms by opening windows, if applicable.
3. Remove plastic sheeting from electronics, if applicable.

II. Maintenance Program

ArmaXX will need to re-treat your home or building for the next 3-6 months, typically one visit per month. The technician will check all glue trap stations for activity and treat the critical areas where spiders are found.

- Please do not remove or relocate glue traps, even if the unit is full.

III. Preventing spider bites

- Shake out clothing and shoes before getting dressed.
- Inspect bedding and towels before use.
- Wear gloves when handling firewood, lumber, and rocks (be sure to inspect the gloves for spiders before putting them on).
- Remove bed skirts. Move the bed away from the wall.
- Don't store boxes and other items underneath beds.
- Exercise care when handling cardboard boxes (some spiders may inhabit the space under folded cardboard flaps).

IV. Expectations

ArmaXX's spider control materials will continue to run brown recluses out of hiding for several months.

- It is very common to see brown recluse spiders after the first month of treatment. In fact, you may witness **an increase in activity**, especially after the initial service.
- During the daytime, you may see a spider slowly crawling on the floor or wall. More than likely, the spider has come in contact with the materials and is **dying!**

If you have any questions, please contact us at 615-285-4056
