ArmaXX Pest Control – Cockroaches

I. Treatment Guidelines

Day of Services:

- You will have to leave your home/property for a minimum of 2 hours.
- Please remove all pets, including fish from your dwelling.
- For faster cockroach control results, remove items from all kitchen cabinets.
- Please check under the bed for personal items and remove.
- Make sure all doors are unlocked, especially storage rooms, attics, basements, crawlspaces, etc.
- Remove garbage from your kitchen and loose trash around your home.
- Secure pet food and water.
- Open drawers in bedrooms.
- Turn off heating/air conditioning units and fans.
- Natural gas “pilot” lights need to be turned off.
- Collect all loose items found on the floor – i.e. pacifiers, bottles and small toys and secure. (Be sure to check corners, under beds, behind the couch, etc . .

Returning Home

1. Open all doors.
2. Ventilate other rooms by opening windows, if applicable.

II. Maintenance Program

- ArmaXX will need to re-treat your home or building for the next 3-6 months, typically one visit per month.
- Please empty trash on a daily basis.
- Limit eating and drinking to the dining area only.

III. Expectations

ArmaXX's cockroach control materials will continue to run roaches out of hiding for several months.

- It is very common to see cockroaches after the first month of treatment. In fact, you may witness **an increase in activity**, especially after the initial service.
- During the daytime, you may see a cockroach slowly crawling on the floor or wall. More than likely, the cockroach has come in contact with the materials and is **dying!**
